

Accessibility Checklist (WCAG) Before Handoff

Use this checklist to verify accessibility requirements before design/dev handoff. Aligns with WCAG guidance.

Visual

- ☐ Text contrast meets WCAG (4.5:1 for normal text; 3:1 for large text and UI components)
- ☐ Information isn't conveyed by color alone
- ☐ Text can scale (zoom) without breaking layouts
- ☐ Icons and controls have sufficient contrast

Interaction

- ☐ All interactive elements have visible focus states
- ☐ Touch targets are at least 24×24 px (44×44 px recommended)
- ☐ Keyboard navigation follows a logical order
- ☐ No interaction depends solely on gestures

Forms

- ☐ Every field has a visible label
- ☐ Helper text is available where needed
- ☐ Error messages explain what happened and how to fix it
- ☐ Required fields are clearly indicated

Content

- ☐ Language is simple and concise
- ☐ Buttons use clear action labels (e.g., "Save", "Continue")

- ☐ Links have descriptive text
- ☐ Images include alt text requirements in design specs

Motion

- ☐ Animations are purposeful and can be reduced or disabled
- ☐ No flashing content above 3 flashes per second

System

- ☐ Loading, success, warning, and error states are designed
- ☐ Empty, offline, and edge states are covered
- ☐ Accessibility requirements are documented for developers
